Radiation Safety in Nuclear Medicine - Gopal B. Saha 2019-07-16

This book is a collection of all pertinent information on radiation safety applicable in nuclear medicine and research using radioactive materials. Radiation exposure causes harm to humans and is strictly controlled by several regulatory authorities (NRC, FDA, EPA, DOT, etc). The practice of nuclear medicine involves the use of radioactive materials in patients and research, and is well regulated by these agencies. However, information on radiation safety practice in nuclear medicine and research areas is scattered throughout the literature and federal registers. For busy nuclear technologists and professionals, it is quite time consuming to look for and acquire specific information and instructions to follow in radiation-related occasions and incidents. This guide provides ready-made, handy information on radiation safety as required in the practice of nuclear medicine, presented in a concise form for easy understanding and quick reference related to a given situation and/or incident. This is an ideal reference for nuclear medicine physicians, nuclear medicine technologists, and researchers using radioactive materials.

**The Fundamental Teachings of Early Buddhism** - Mun-keat Choong 2000

This book is a comparative examination of the main teachings contained in the Sutranga portion of the Pali Samyutta-nikaya (SN) and its counterpart in Chinese canon, a translation of a now lost Sanskrit Samyuktagama (Za-ahan-jing) (SA). The SN and SA are essentially two different versions of the same collection of discourses. This study builds on the work of Yin Shun, which demonstrates the historical importance of SN/SA in the formation of the early Buddhist canon. In particular, it is based on Yin Shun's recognition of the three-anga structure of SN/SA, and of the status of its Sutranga portion as of prime importance in the historical formation of this nikaya/agama, and as containing the most fundamental teachings of Buddha. The aim of this research is to reveal and clarify the similarities and differences between SN and SA, with regard to the principal Buddhist teachings contained in their Sutranga portion.

*The Red and the Black* - Brian A. Sparkes 2013-10-16

The Red and the Black covers the major stages in the history of Greek pottery production, both figured and plain, as they are understood today. It provides an up-to-date evaluation of ways of studying Greek pottery and encourages new approaches. There is a detailed analysis of the subject matter of figured scenes covering some of the main preoccupations of ancient Greece: myth, fantasy and everyday life. Furthermore, it sets the artefacts in the context of the societies that produced them, highlighting the social, art historical, mythological and economic information that can be revealed from their study. This volume also covers a hitherto neglected area: the history of the collecting of Greek pottery through the Renaissance and up to the present day. It shows how market values have gradually increased to the high prices of today and goes on to take a closer look at the enthusiasm of the collectors.

**Fundamentals of Nuclear Pharmacy** - Gopal B. Saha 2013-06-29

A new edition of a book is warranted when the book is successful and there are many new developments in the related discipline. Both have occurred for this book during the past 7 years since its second edition. The growth and development in nuclear pharmacy and radiopharmaceutical chemistry along with the continued success of the book have convinced us to update the book; hence this third edition. This book is a ramification of my nuclear pharmacy courses offered to pharmacy students specializing in nuclear pharmacy, nuclear medicine residents, and nuclear medicine technology students. The book is written in an integrated form from the basic concept of atomic structure to the practical clinical uses of radiopharmaceuticals. It serves both as a textbook on nuclear pharmacy for pharmacy students and nuclear medicine technologists, and as a useful reference book for many professionals related to nuclear medicine, such as nuclear medicine physicians and radiologists. The book contains 12 chapters. Each chapter is

written as comprehensively as possible based on my personal experience and understanding. At the end of each chapter, a section of pertinent questions and problems and some suggested reading materials are included. I have made justifiably many additions and deletions as well as some reorganization in this edition. Chapter 3 is entirely dedicated to instruments for radiation detection and measurement, including brief description of gas detectors, gamma-detecting instruments, and tomographic scanners.

Mobile and Wireless Communications - Salma Ait Fares 2010-01-01

Mobile and wireless communications applications have a clear impact on improving

the humanity wellbeing. From cell phones to wireless internet to home and office devices, most of the applications are converted from wired into wireless communication. Smart and advanced wireless communication environments represent the future technology and evolutionary development step in homes, hospitals, industrial, vehicular and transportation systems. A very appealing research area in these environments has been the wireless ad hoc, sensor and mesh networks. These networks rely on ultra low powered processing nodes that sense surrounding environment temperature, pressure, humidity, motion or chemical hazards, etc. Moreover, the radio frequency (RF) transceiver nodes of such networks require the design of transmitter and receiver equipped with high performance building blocks including antennas, power and low noise amplifiers, mixers and voltage controlled oscillators. Nowadays, the researchers are facing several challenges to design such building blocks while complying with ultra low power consumption, small area and high performance constraints. CMOS technology represents an excellent candidate to facilitate the integration of the whole transceiver on a single chip. However, several challenges have to be tackled while designing and using nanoscale CMOS technologies and require innovative idea from researchers and circuits designers. While major researchers and applications have been focusing on RF wireless communication, optical wireless communication based system has started to draw some attention from researchers for a terrestrial system as well as for aerial and satellite terminals. This renewed interested in optical wireless communications is driven by several advantages such as no licensing requirements policy, no RF radiation hazards, and no need to dig up roads besides its large bandwidth and low power consumption. This second part of the book, *Mobile and Wireless Communications: Key Technologies and Future Applications*, covers the recent development in ad hoc and sensor networks, the implementation of state of the art of wireless transceivers building blocks and recent development on optical wireless communication systems. We hope that this book will be useful for students, researchers and

practitioners in their research studies.

**Managing Newborn Problems** - WHO 2003-12-31

Every year throughout the world, about four million babies die before they reach one month old, most during the critical first week of life. Most of these deaths are a result of the poor health and nutritional status of the mother, combined with problems such as tetanus or

asphyxia, trauma, low birth weight, or preterm birth. However, many of the conditions which result in perinatal death are preventable or treatable without the need for expensive technology. Against this background, this publication contains guidance on evidence-based standards for high quality care provision during the newborn period, considering the needs of mother and baby. It has been produced to assist countries with limited resources to reduce neonatal mortality. The information is arranged under four main headings: clinical assessment, findings and management; principles of newborn baby care; procedures; record keeping and essential equipment, supplies and drugs.
