Secret Marvels of the World Lonely Planet 2017-08-01 Featuring communist bunkers, burning gas craters and at least one sponge-rock fluorescent grotto built by Polish monks, this book reveals weird and wonderful sights the crowds don't reach. We've all heard of India's Taj Mahal, but what about Karna Mata Temple? It's a building teeming with rats so revered they enjoy A-list treatment with daily offerings of milk and fruit. It's no secret that visitors to Berlin can see parts of its infamous Wall still standing in the city. Not so many people know that segments of the wall have travelled all around the world and can be found in places including Los Angeles, Japan and Iceland. Stonehenge is one of the UK's most popular tourist sites. So why not beat the crowds and head to Nebraska instead, where you can marvel at a Carhenge - a replica of the great monolith site constructed entirely from vintage cars. This packed and fascinating title takes its readers on a journey through the world's lesser known marvels. Dive into an underworld of the planet's most surprising, fun, perplexing, kitsch and downright bizarre sights - and explore human stories and mysterious happenings that you won't find inside a regular guidebook. From eerie natural wonders to historical oddities and bizarre architecture, this is a travel companion for the incurably curious. About Lonely Planet: Since 1973, Lonely Planet has

become the world's leading travel media company with guidebooks to every destination, an award-winning website, mobile and digital travel products, and a dedicated traveller community. Lonely Planet covers must-see spots but also enables curious travellers to get off beaten paths to understand more of the culture of the places in which they find themselves. The world awaits! Lonely Planet guides have won the TripAdvisor Traveler's Choice Award in 2012, 2013, 2014, 2015, and 2016. 'Lonely Planet. It's on everyone's bookshelves; it's in every traveller's hands. It's on mobile phones. It's on the Internet. It's everywhere, and it's telling entire generations of people how to travel the world.' -- Fairfax Media 'Lonely Planet guides are, quite simply, like no other.' - New York Times Important Notice: The digital edition of this book may not contain all of the images found in the physical edition.

Citizen-Led Innovation for a New Economy John Gaventa 2020-07-10T00:00:00Z This collection of eleven cases of citizens organizing for change in Canada and the United States gives form and substance to the ideal of a new economy based on fairness and environmental sustainability. These are stories of local citizens responding to the economically distorting effects of globalization, the environmental degradation brought about by industrial development and a deep concern about climate change. Grappling with complex problems in their local communities, they are forging innovation, prying open cracks in the system and seizing opportunities to redirect economic life. The cases in Citizen-Led Innovation for a New Economy explore urban and rural initiatives among citizens in ethnically diverse settings — First Nations, Inuit, Latino, African American, predominantly white and mixed communities — where self-organized efforts to bring about change have generated innovation in economic and social life. Innovation in these cases means a new way of working, tying economic justice to the creation of multiple types of environmental, economic and social assets or forms of wealth. They are stories of individuals working together to challenge the short-term focus of political leadership by taking action for the sake of future generations.

Developments in Fish Telemetry Pedro R. Almeida 2007-10-18 This volume includes 33 peer-reviewed papers presented at the Sixth Conference on Fish Telemetry held in Europe (Sesimbra, Portugal, 5-11 June 2005). The papers focus on migration and behaviour, species

conservation and habitat rehabilitation, human impacts and fisheries, telemetry methodology and new technology. This book is aimed at scientists and engineers actively involved in aquatic telemetry projects.
