Sprout Lands: Tending the Endless Gift of Trees

- William Bryant Logan 2019-03-26
Arborist William Bryant Logan recovers the lost tradition that sustained human life and culture for ten millennia. Once, farmers knew how to make a living hedge and fed their flocks on tree-branch hay. Rural people knew how to prune hazel to foster abundance: both of edible nuts, and of straight, strong, flexible rods for bridges, walls, and baskets. Townspeople cut their beeches to make charcoal to fuel ironworks. Shipwrights shaped oaks to make hulls. No place could prosper without its inhabitants knowing how to cut their trees so they would sprout again. Pruning the trees didn't destroy them. Rather, it created the healthiest, most sustainable and most diverse woodlands that we have ever known. In this journey from the English fens to Spain, Japan, and California, William Bryant Logan rediscovers what was once an everyday ecology. He offers us both practical knowledge about how to live with trees to mutual benefit and hope that humans may again

learn what the persistence and generosity of trees can teach.

The Tree Experts - Mark Johnston 2021-08-31
Trees are now in the public eye as never before. The threat of tree diseases, the felling of street trees, and the challenge of climate change are just some of the issues that have put trees in the media spotlight. At the same time, the trees in our parks, gardens, and streets are a vital resource that can deliver environmental, social, and economic benefits that make our towns and cities attractive, green, and healthy places. Ever since Roman times when amenity trees were first planted in Britain, caring for those trees has required specialist skills. This is mainly because of the challenges of successfully integrating large trees into the urban environment and the risks involved in working with them, often at height and in close proximity to people, buildings and roads. But who are the people with the specialist expertise to care for our amenity trees? While professionals such as

horticulturists, landscape architects, conservationists and foresters have a role to play, it is the arboriculturists who are the 'tree experts'. For centuries arboriculture was often synonymous with forestry or considered an aspect of horticulture, until it emerged in the nineteenth century as a separate discipline. There are now some 22,000 people employed in Britain's arboricultural industry, including practical tree surgeons and arborists, local authority tree officers, and arboricultural consultants. This is the first book to trace the history of Britain's professional tree experts, from the Roman arborator to the modern chartered arboriculturist. It also discusses the influences from continental Europe and North America that have helped to shape British arboriculture over the centuries. The *Tree Experts* will have particular appeal to those interested in the natural and built environment, heritage landscapes, social history, and the history of gardening.
