Heart and Toxins - Dr. Meenakshisundaram Sundaram Ramachandran 2014-08-12

The Heart and Toxins brings together global experts to provide the latest information and clinical trials that make the connection between genetic susceptibility, gene expression, and environmental factors in cardiovascular diseases. This unique reference, edited by renowned cardiologist Meenakshi Sundaram Ramachandran, solves the problem of managing multiple clinical cases of cardiovascular toxicity. It allows connections to be made between research, diagnosis, and treatment to avoid higher morbidity and mortality rates as a result of cardiovascular toxicity. Structured to bring together exploration into the epidemiology, molecular mechanism, pathogenesis, environmental factors and management in cardiovascular toxins" Included various topics on cardiovascular toxins such as plant, chemical, animal, nanomaterial and marine biology induced cardiac damage - which are new ideas discussed in detail Comprehensive chapters on the cardiovascular toxicity from drugs, radiotherapy and radiological imaging Enables you to manage multiple clinical cases of cardiovascular toxicity Outlined conclusions at the end of each chapter providing "key learning points" to help you organize the chapter's details without losing insight

Human Herpesviruses - Ann Arvin 2007-08-16

This comprehensive account of the human herpesviruses provides an encyclopedic overview of their basic virology and clinical manifestations. This group of viruses includes human simplex type 1 and 2, Epstein-Barr virus, Kaposi's Sarcoma-associated herpesvirus, cytomegalovirus, HHV6A, 6B and 7, and varicella-zoster virus. The viral diseases and cancers they cause are significant and often recurrent. Their prevalence in the developed world accounts for a major burden of disease, and as a result there is a great deal of research into the pathophysiology of infection and immunobiology. Another important area covered within this volume concerns antiviral therapy and the development of vaccines. All these aspects are covered in depth, both scientifically and in terms of clinical guidelines for patient care. The text is illustrated generously throughout and is fully referenced to the latest research and developments.

Acute Heart Failure - Alexandre Mebazaa 2009-12-24

For many years, there has been a great deal of work done on chronic congestive heart failure while acute heart failure has been considered a difficult to handle and hopeless syndrome. However, in recent years

acute heart failure has become a growing area of study and this is the first book to cover extensively the diagnosis and management of this complex condition. The book reflects the considerable amounts of new data reported and many new concepts which have been proposed in the last 3-4 years looking at the epidemiology, diagnostic and treatment of acute heart failure.

Countering the Problem of Falsified and Substandard Drugs - Institute of Medicine 2013-06-20

The adulteration and fraudulent manufacture of medicines is an old problem, vastly aggravated by modern manufacturing and trade. In the last decade, impotent antimicrobial drugs have compromised the treatment of many deadly diseases in poor countries. More recently, negligent production at a Massachusetts compounding pharmacy sickened hundreds of Americans. While the national drugs regulatory authority (hereafter, the regulatory authority) is responsible for the safety of a country's drug supply, no single country can entirely guarantee this today. The once common use of the term counterfeit to describe any drug that is not what it claims to be is at the heart of the argument. In a narrow, legal sense a counterfeit drug is one that infringes on a registered trademark. The lay meaning is much broader, including any drug made with intentional deceit. Some generic drug companies and civil society groups object to calling bad medicines counterfeit, seeing it as the deliberate conflation of public health and intellectual property concerns. *Countering the Problem of Falsified and Substandard Drugs* accepts the narrow meaning of counterfeit, and, because the nuances of trademark infringement must be dealt with by courts, case by case, the report does not discuss the problem of counterfeit medicines.

How Tobacco Smoke Causes Disease - 2010

This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.

Pharmacotherapy of Heart Failure - S. K. Gupta 2005

Heart failure has been traditionally explained as a reduction in cardiac pumping capacity, caused by problems in the blood. Till now the therapy prescribed has been symptomatic, involving the use of diuretics, muscular stimulation and blood vessel relaxants. But recent research has focussed on the circumstances leading up to heart failure, which includes abnormal hemodynamics, atherosclerosis, dietary and nutritional anomalies, obesity, immunity and other metabolic disorders. This book brings together such research in one volume, including molecular and cellular aspects of heart failure and its pathophysiology. It is a significant contribution to the understanding and prevention of heart failure, and will be welcomed by cardiologists, pharmacologists, biochemists, and all those who practice and research the subject. The contributors from around the world include Australia, Brazil, Canada, Denmark, India, and USA.

Drug Therapy in Nursing - Diane S. Aschenbrenner 2009

This text presents a totally nursing-focused framework for teaching and learning nursing pharmacology, and "places the patient" at the center of all drug administration decisions and considerations. The book presents core drug knowledge using prototypes of different drug classes and emphasizes core patient variables that influence the patient's response to therapy. This thoroughly updated Third Edition covers newly approved drugs, has separate chapters on drugs affecting fungal and viral infections, and includes more pathophysiology information. FDA Black Box warnings have been added to the discussion of each prototype when applicable, and safety alerts have been added to emphasize prevention of common medication errors. A companion Website offers student and instructor ancillaries including NCLEX®-style questions, pathophysiology animations, medication administration videos, and dosage calculation quizzes.

Pharmacology for Pharmacy and the Health Sciences - Michael Boarder 2017

This title adopts a novel patient-centred approach to introduce drug action at the cellular and molecular level while developing clinical topics in the context of individual patients and their experience of illness. In so doing, it takes the important step of relating the scientific basis of pharmacology to real-life pharmacy practice

The ESC Textbook of Cardiovascular Medicine - European Society of Cardiology 2009-08-27

The ESC Textbook of Cardiovascular Medicine is a teaching text that contains the knowledge base needed by every general cardiologist and specialist cardiologist as a background to their specialty interest. The textbook content is based on the Core Curriculum of the European Society of Cardiology, making the textbook essential reading for all cardiology trainees. The textbook contains much of the evidence base that is used to derive the practice guidelines published by the European Society of Cardiology, and its contents will be used as a basis for testing the knowledge of trainees who seek to qualify as cardiologists and of cardiologists who must re-accredit their status as cardiovascular health care providers. The book contains 38 chapters flowing from the clinical and investigation interface with the patient through comprehensive description of disease processes and pathophysiological states and finally to the complex interrelationship between the heart and the mind. The text and design is intended to produce a book that is readable and readily understandable. The text is interspersed with many full color diagrams and simple tabulations. Line diagrams are re-drawn to produce a consistent feel to the book. Chapters relating to cardiac imaging, for example, echocardiography, computed tomography, cardiac magnetic resonance, and nuclear cardiology are richly illustrated. The book is comprised of a print and on-line version. The text in the print version has comprehensive referencing, but the references themselves are available only from the on-line edition where the citations are directly linked to PubMed in order to facilitate retrieval of abstracts and full texts, where available. In both versions, there is a "further reading" list, which consists of major reference works, practice guidelines, especially those published by the European Society of Cardiology, scientific statements, and task force reports. The on-line version includes video images that are represented by a static photograph in the print version. Each chapter begins with a summary of the chapter and a listing of the chapter contents, and is completed with a few paragraphs of personal reflection from the authors about the standing of their subject and its likely development during the next five years.
