The German Law of Torts - Basil S Markesinis 2002-06-10
Since its first appearance in 1986 this book has won uniform praise from many of the world's leading comparatists, has been acclaimed by senior judges and has been cited by the courts of many countries. This new edition of the work, substantially re-written and systematically up-dated, contains over 150 leading judgments, most translated in their entirety, along with references to over 2000 other

decisions from Germany and the Common law world. While the book remains an ideal tool for teaching comparative torts and comparative methodology, the fact that it has been extensively rewritten and enlarged now also makes it an indispensable source of inspiration for those with a professional interest in tort litigation and tort reform. Topics discussed include economic loss, psychiatric injury, wrongful birth, life and sterilisation cases, products liability, traffic accidents,

accidents at work,
environmental liability and
compensation for personal
injuries and death.

Evaluating Vehicle Emissions Inspection and Maintenance Programs - National Research Council 2001-12-16

Emissions inspection and maintenance (I/M) programs subject vehicles to periodic inspections of their emission control systems. Despite widespread use of these programs in air-quality management, policy makers and the public have found a number of problems associated with them. Prominent among these issues is the perception that emissions benefits and other impacts of I/M programs have not been evaluated

adequately. Evaluating Vehicle Emissions Inspection and Maintenance Programs assesses the effectiveness of these programs for reducing mobile source emissions. In this report, the committee evaluates the differences in the characteristics of motor vehicle emissions in areas with and without I/M programs, identifies criteria and methodologies for their evaluation, and recommends improvements to the programs. Most useful of all, this book will help summarize the observed benefits of these programs and how they can be redirected in the future to increase their effectiveness.
